

Microbiological Swab Sampling

Validation of cleaning protocols through microbiological swab sampling.

As per the National State of Disaster: Alert Level 4, South Africans are in the process of returning to work post the national lockdown. When employees return to work, it is important for companies to implement appropriate public health measures to reduce the risk of exposure to Coronavirus (COVID-19).

These will have to be in line with Government Gazette No. 43257, Notice No. 479, *COVID-19 Occupational Health and Safety Measures in Workplaces*, dated 29 April 2020.

We at Momentum Wellness are prepared and aligned with government to support efforts to curb the spread of the virus - "flatten the curve" and prevent a spike in infections. Our purpose remains more health for more South Africans for less. Health and wellbeing are at the core of our existence and, as a result, contributing to the fight against coronavirus (COVID-19) is top priority for us.

At the core and as a first line of defence, the emphasis has heavily been placed on being sanitary savvy: **Proper and extensive cleaning of work surfaces**, washing hands regularly and thoroughly for at least 20 seconds, carry and use hand sanitizer, don't touch your face and practice social distancing.

What is our Solution?

As an essential service provider permitted to render services during the South African lock-down period, Momentum Wellness has therefore made available to our clients **Microbiological Swab Sampling to validate the efficiency of cleaning practices** within the workplace.

Momentum OCSA will **at cost** take microbiological swab samples on surfaces in your workplace to determine the presence of microbial activity. Although this will not serve as a measure of the coronavirus (COVID-19) contamination, the results may be used internally to validate your cleaning protocols and allow management to improve cleanliness in the workplace.

Why conduct an Assessment?

Health and Productivity – Mitigating control measures recommended to ensure surfaces are efficiently cleaned aim to protect worker health, lower healthcare and social costs, increase life expectancy, reduce absenteeism, increase productivity and boost economic growth.

At Momentum OCSA, we appreciate how important the health and wellbeing of your employees are to your company. We share the same values, welcoming the opportunity to provide your company with quotation on our Microbiological Swab Sampling service offering. Please feel free to contact us on the details listed below for an obligation free quotation.
